Work Experience

Max Planck Institute for Intelligent Systems

Research Group Leader.

DUTIES: Conduct an independent research.

Tübingen, Germany

01.04.2018 – 31.01.2022

Department of Mathematics, Faculty of Science, Mahidol University

Lecturer in Mathematics.

DUTIES: Teach courses and conduct an independent research.

Bangkok, Thailand

04.01.2016 – 31.12.2017

Max Planck Institute for Intelligent Systems

Research Scientist.

DUTIES: Conduct an independent research.

Tübingen, Germany

01.06.2015 – 31.12.2015

Sirindhorn International Institute of Technology

Teaching Assistant, ITS100 Introduction to Programming in C.

DUTIES: Assist the instructor in the programming laboratory.

Pathumthani, Thailand

2010

Sirindhorn International Institute of Technology

Teaching Assistant, ITS050 Introduction to Programming in C.

DUTIES: Assist the instructor in the programming laboratory.

Pathumthani, Thailand

2008

Education

MAX PLANCK INSTITUTE FOR INTELLIGENT SYSTEMS

Ph.D. in Machine Learning (Summa Cum Laude)

SUPERVISOR: Prof. Bernhard Schölkopf

THESIS: “*From Point to Probability Measures : Statistical Learning on Distributions with Kernel Mean Embedding*”

DATE OF EXAMINATION: 30.09.2015

DATE OF AWARD: 21.12.2015 (University of Tübingen)

Tübingen, Germany

04.04.2011 – 31.05.2015

UNIVERSITY COLLEGE LONDON

M.Sc. in Machine Learning (Distinction)

MASTER THESIS: “*Infinite Independent Subspace Analysis*”

THESIS SUPERVISOR: Prof. Yee Whye Teh

M.Sc. TUTOR: Prof. John Shawe-Taylor

DATE OF AWARD: 01.11.2010

London, United Kingdom

10.2009 – 10.2010

SIRINDHORN INTERNATIONAL INSTITUTE OF TECHNOLOGY

B.Sc. in Computer Science (First Class Honor)

SCHOLARSHIP: Young Scientist and Technologist Programme (YSTP)

THESIS: “*Robust Graph Hyperparameter Learning for Graph-based SSL*”
“*Query Selection via Weighted Entropy for Graph-based SSL*”

GPA: 3.97/4.00 | Rank: 1/441

DATE OF AWARD: 26.03.2009

Pathumthani, Thailand

22.03.2005 – 26.03.2009

MAHIDOL WITAYANUSORN SCHOOL (PUBLIC ORGANISATION)

SCHOLARSHIP: Mahidol Wittayanusorn Scholarship

PROJECT: “*Moving Objects Detection in Video System*”

GPA: 3.91/4.00

Nakornpathom, Thailand

03.2002 – 03.2005

Research Interests

My research interest lies in the area of artificial intelligence, machine learning, statistical learning theory, and its applications. The topics of interest include, but not limited to

- Kernel methods in machine learning
- Learning in high dimensional space
- Causal learning and counterfactual prediction
- Bayesian inference and nonparametric models
- Computational astronomy
- Semi-supervised learning
- Multi-task and transfer learning
- Reinforcement Learning

Selected Research Projects

DS4: A Discriminative Spatial-Spectral Model for Speckle Suppression

A machine learning software that processes unocculted and highly speckled light in the P1640 spectroscopic coronagraph for the purpose of exoplanet detection.

Face-based Image Retrieval System

The system uses a human face as a query for searching and retrieving digital images in large databases. A face detection algorithm is used to detect faces, which are then compared with the query image. A promising similarity measure algorithm is used to compare the human face.

Dicom Viewer Software

This software enable us to read the DICOM images from cone beam CT (i-CAT) and display in axial, coronal, sagittal and panoramic views. The software also shows Cross Section View which is reconstructed as a cross plane image intersecting at a right angle with the panoramic line, relative position of mandibular canal. TMJ view is also another feature for assisting diagnostic of TMJ abnormalities.

Emotion Recognition from Speech

We develop the system that is able to recognise emotions from speech signals. Four types of features are used namely pitch-related, intensity-related, duration-related, and spectral-related features. The feature selection is performed using Principle Component Analysis (PCA). The results of the experiments are then compared among K-nearest neighbour, naive Bayes, and Support Vector Machine.

PACS (Picture Archiving Communication System) for Dentistry

PACS (Picture Archiving Communication System) is a system that manage and transfer information for dental field focusing on 2 main fields as follows. First application was to open Digital Imaging and Communications in Medicine (DICOM) files of patients inside the database via Local Area Network (LAN) and Hypertext Transfer Protocol (HTTP). Second application was to pass patients personal data and treatment data on the network by applying MySQL database.

ULookr : A Simple Search Engine

ULookr is a web-based search engine implemented in PHP. This software demonstrates how search engines work. Important modules of *ULookr* consists of web crawler, web indexer, and information retrieval modules.

Simulation of Traffic Light Control Using Reinforcement Learning

This research studied the application of reinforcement learning in the traffic light control. The system takes into account the number of cars at each junction and learn the optimal policy to control the traffic light.

Moving Object Detection in Video System

This project used many image processing techniques for detecting the moving objects in video scenes. The result of the system were quite promising. This project was also supported by National Electronics and Computer Technology Centre.
